Please select the operating system and the version of sound card driver.Ocular damage by lithium in a rat. The effect of lithium on eye development was studied in the developing rat. Three groups of rat pups (n = 15/group) were administered either saline solution or lithium solution (1 mmol/kg/day) intraperitoneally for 1, 3, or 6 weeks and were killed. Lithium-exposed rats showed significantly longer posterior globe length (10.8% longer, p less than 0.001), thinner lens (12.2% thinner, p less than 0.001), and less developed pupillary reflex (17.2% less developed, p less than 0.001) than the controls. This finding indicates that lithium administration from day 1 of gestation to day 2 after birth might have adverse effects on the developing eye.The Russian-Syrian joint air strike on the Jordanian-Israeli border left 37 dead and several injured on September 17. A hospital official said that at least 11 of the dead were Syrian refugees, who were wounded in the attack. A Syrian refugee was killed in a mortar attack on the area on Thursday, and a woman and a child were injured in artillery shelling on the border, AFP reported. Jordanian shelling, an attack by mortars and Katyusha rockets on the Israeli-occupied Golan Heights also left three Syrians wounded. After the air strike, Israel and Jordan signed a reconciliation deal, with the latter cancelling all debts incurred by refugees from the war-torn country. Israel has already been allowed to shoot down dozens of Syrian warplanes and missiles. The recent violence has seen more than 700 Syrians killed in air strikes and barrel bombs alone since Russia intervened in Syria in 2015.Radiological evaluation of cerebral salt wasting in adult patients. To identify the clinical characteristics and radiological findings of adult patients with cerebral salt wasting (CSW). We performed a retrospective study of patients diagnosed with CSW from February 2007 to May 2010 at a single hospital in Korea. Twenty
